EDUCATION

Florida State University — GPA: 3.42 **Graduating May 2027; Open to relocation**

Bachelor of Science in Computer Science

- *Honors: Vires Scholarship Recipient, Dean's List (4 Semesters), University Honors Program*

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Parallel Programming, Databases, Theory of Computation, Linear Algebra

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, SQL, C, C++, C#

AI/ML: Retrieval-Augmented Generation (RAG), Pinecone, OpenAI API (embeddings, chat), Amazon Bedrock, PyTorch, PyTorch Geometric, NetworkX

Backend & Cloud: Node.js, Express, REST APIs, MongoDB/Mongoose, MySQL, SQLite, AWS, Apache, SAML SSO

Frontend & Tools: React, Next.js, Vite, Git/GitHub, Claude Code, Linux/Unix, Jupyter, Power Apps, Power Automate

EXPERIENCE

FSU — Special Projects Developer **Tallahassee, FL; August 2025 – Present**

- Sole developer of a full-stack transcript tracking system for FSU's Office of Admissions (React 19/Vite, Node.js/Express 5 REST API, MongoDB/Mongoose), replacing a manual workflow; used by 50+ staff and holding 10,000+ transcripts.
- Kept the dashboard fast with server-side pagination, a compound MongoDB index, and debounced filtering, plus type-ahead search across 54,000+ institutions.
- Configured SAML single sign-on in Apache and enforced four staff roles via Express middleware and React route guards, with a nine-event audit trail.

Dept. of Computer Science — Research Assistant **Tallahassee, FL; September 2024 – July 2025**

- Built an EEG preprocessing pipeline in Python and PyTorch Geometric that segments signals into fixed windows and converts them into functional brain-connectivity graphs (channels as nodes; Pearson correlation and mutual information as edges).
- Combined Deep Graph Infomax self-supervised embeddings with a temporal GNN to fuse spatial and temporal features, reaching mid-70% accuracy with improved F1 and AUC over single-GNN baselines in preliminary ablations; presented at FSU's 2025 UROP symposium.

Bastion Technologies — Software Engineer Intern **Remote; May 2025 – Present**

NASA Contractor — Engineering & Technical Services

- Built a 6-screen NASA training platform (Power Apps, Power Fx, Power Automate, SharePoint) that moved certificates from paper to online and tracks intern and new-hire readiness; 20+ test users ahead of a 500+ user rollout.

PROJECTS

RSO Funding Assistant | TypeScript, Postgres + pgvector, Claude, MCP **Fall 2026**

- RAG assistant answering student orgs' SGA funding questions from FSU's Financial Manual: TOC-driven section chunking, pgvector search, and Claude answers whose citations are verified against the source; eval set and CI.

Computational Neuroscience Chatbot | Next.js, Amazon Bedrock, Pinecone **Summer 2024**

- Built a RAG support chatbot whose Next.js API route calls Amazon Bedrock Knowledge Bases (RetrieveAndGenerate) over a Pinecone vector index, so answers are grounded in retrieved source passages rather than the model's training data.

LEADERSHIP & INVOLVEMENT

Polemarch (Chapter President), Kappa Alpha Psi Fraternity, Inc. (Apr 2026 – Present): lead an 18-member chapter and 6-person executive board.

Chair, RSO Allocation Committee, Student Government Association (May 2026 – Present): oversee funding for FSU's 750+ registered student organizations.

President, CodeEducation at FSU (Dec 2024 – Jul 2025).

Web Chair, Theta Tau Engineering Fraternity (Nov 2024 – May 2025).
